Henrik, The second paragraph below, "the other event was
10/1/96"...Do you mean 11/1/96? Bill

The last dust event was on 10/29/96 -- We have photographs and we were still on the roof cleaning the valleys. There is one blue car which has a wisp of dust on it, which is primarily fine and grayish color. It doesn't look like clinker to me, but could be I guess. We were, like I said, still cleaning off the roof and it happened to be a beautiful day that day and a stiff wind if I remember. Material could have been blown off of the roof.

The other event was 10/1/96 -- Looks like the same blue car had dust on it. Again, we were on the roof.

We finished cleaning the roof -- October 25th, but went back the following week to clean the valleys -- We were still cleaning the valleys the next week and I think we were done November 1st. Jerry isn't here so I can't find the final date, but I know it wasn't before the 1st of November.

Henrik
